

A tent support framework with the ability for quick assembling and folding

Abstract

5

A tent support framework with the ability for quick assembling and folding which is installed between the inner tent and the outer tent comprises: a set of upper and lower covers, a plurality of movable arms, and a plurality of sets of supporting arm. By elastic force to hold the upper and lower covers for supporting the inner and outer tents, while by releasing the elastic force to separate the upper and lower covers for folding the tents. Thereby, the present invention can quickly assemble and fold, and is applicable to use for various tents.
